

RESILIENCE IN RESTORATION

Community-Based Ecosystem Restoration Conference

Bringing together restoration practitioners and scientists from communities, universities, government, civil society and students. The first Community-Based Ecosystem Restoration Conference will weave informal and formal knowledge exchanges, and dialogues for climate futures. We will approach the theme “Resilience in Restoration” using participant-led methodologies to centre co-sensing and collaborative approaches in creating a more sustainable future, emerging in line with the UN Sustainable Development Goals in the Decade of Ecosystem Restoration (2021-2030).

9:00am - 5:00pm | 25-26 June 2023

Lepak Lounge, Rainforest Discovery Centre, Sandakan
